

# Assignment 4: Heuristic evaluation

Perform a heuristic evaluation of a security feature in your web browser or on a website.

1. Document the heuristics that you used, why you chose them, and your results. Be sure to mention who you're designing for.
2. Provide suggestions on how any potential problems could be improved.
  - a. Your suggestion might be a new design, change to a feature, or it might be a suggestion for additional empirical research.

During our sync session we will form groups of 4 people and each of you will have 7 minutes to share your findings. Prepare a slide deck that documents the user flow or UX you chose to evaluate. Present your top 3 findings and suggestions. You may also choose to pre-record a demo of the feature you evaluated. Spend up to 3 minutes per person sharing feedback and asking questions.
