

Assignment 6: Evaluate a Warning

Based on what you learned about the C-HIP model, your assignment is to use it to evaluate a new security warning that wasn't already covered by the readings. You will perform a heuristic evaluation, using the C-HIP as a model for the heuristics. You should do the following:

1. Create a set of heuristics based on the different parts of the C-HIP model.
2. Choose a security warning to evaluate.
3. Perform a heuristic evaluation of the warning, documenting the entire process.
4. Based on your evaluation, propose improvements to the warning.

Your deliverable will be the set of heuristics, description of the warning that you evaluated, and a report that documents the evaluation and your recommendations.
